

Build a Wind Generator

Want Free Power? Build A Wind Generator!

It is true. You may have heard it and not believed it, but you can build a wind generator on your own. Even better is the large amounts of money you can save when you build a wind generator instead of purchasing one from a wholesaler or retailer. It is easy to build a wind generator with the plans and instructions available. By utilizing used auto parts, odds and ends and general supplies from your local hardware store, you can build a wind generator in no time.

You may be wondering why you should build a wind generator when you can just purchase one, but commercial wind generators cost in the thousands to buy. The materials needed to build a wind generator, the DC motor, batteries, towers and hub, are fairly inexpensive. It is possible to build a wind generator for under \$500 and that means realizing the return on your investment years before you would have buying a professionally installed commercial model. Even if you invest in better quality materials when you build a wind generator, you will still find your total cost way below that of the professional installation.

Electric power generated by wind is one of the most efficient renewable power resources available. Many cities worldwide have started to convert to wind power to supplement their energy supply. It is possible to have a green energy supply by taking the time to build a wind generator. Not only are you helping the environment, but also you can save money at the same time.

It is not difficult to build a wind generator. The average do-it-yourselfer can complete this project with simple tools. There are detailed instructions and plans available to build a wind generator in your workshop or home. So build your wind generator today and put it on your roof or support pole and start generating your free power, thanks to a little breeze.
